

## 9 GREAT TIPS & TECH DEVICES TO KEEP YOUR BUSINESS SAFE DURING COVID-19 & BEYOND

No matter the industry, COVID-19 has transformed the business world. Thankfully, with simple proactive measures and some innovative devices, you can prevent the virus from entering your workplace.

Leaders like you now play a critical role in keeping staff, customers, and communities safe while also having the opportunity to offer something we all could use more of—peace of mind.

# WHY SHOULD I INVEST IN HEALTH TECH DURING COVID?

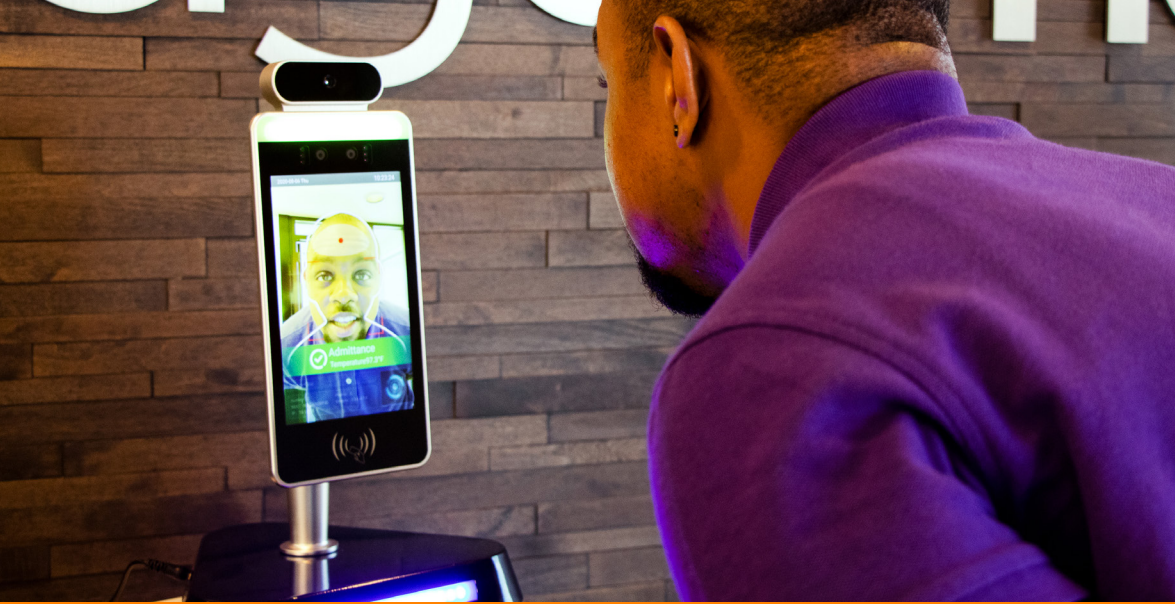

We're not going back to business as usual anytime soon. To keep doors open and welcome staff and clientele safely inside (especially during cold weather), leaders need to build and maintain a strong COVID strategy.

We're facing an unfamiliar reality of what the workplace's "new normal" will look like for [the foreseeable future](#). This includes critical health and safety factors that can keep your organization running smoothly even during this challenging time.

There are some great tech-free methods that can set a strong safety foundation including:

- **Clear Signage:** Place clear, simple, and easy-to-read signs around your workplace to remind staff and guests about current restrictions, protocols, and best health practices.
- **Sick? Stay Home:** All employees feeling under-the-weather or running a fever must stay home. COVID-19 is [incredibly contagious](#). One infected employee can quickly infect both fellow team members and customers which can lead to a total shutdown of your business.
- **Limit Who Comes In:** Strictly follow [all CDC guidelines](#) regarding capacity, and don't allow anyone with a fever inside your facility. Also, if employees can work from home, strongly consider allowing them to do so.
- **Masks & Social Distancing:** Ensure that everyone has at least six feet of space between each other and require masks for anyone entering your business.

These are all great places to start, but it's often still not enough. At a time when an outbreak can lead to a permanent closure, it's critical to take every safety measure possible—and thanks to [modern smart technology](#) we have more options than ever.

# TEMPERATURE CHECK, FACIAL RECOGNITION & ENTRY KIOSK

Stop anyone with a high temperature from entering your building with this innovative device. In less than a second, the instant fever scanner automatically checks the temperatures of incoming employees or guests.

If a normal reading is detected, users get a literal green light and are allowed entry. If a fever is detected, a visual and audio alert will announce that they're barred from coming inside. A notification is also sent out to inform business owners or managers of the elevated temperature. And unlike those temperature "guns," touchless systems require no staff to run. This frees up resources and protects your team's health.

The temperature check and entry kiosk can also include these optional features:

- **Mask Requirements:** If someone tries to enter without a mask, they'll be denied entry even if they aren't running a fever.
- **Facial Recognition Entry:** The kiosk's library can recognize thousands of faces. With a quick look at the camera, only authorized individuals will be cleared for entry.
- **Card Swipe Entry:** Grant entry via a dongle, PIN, or card swipe.
- **Timed Entry:** If you want to restrict entry between certain times, set the Time Clock feature which will only admit people during specified hours.

# DENSITY AUTOMATED CAPACITY COUNTER

To safely limit the number of people inside a building while following all current regional occupancy guidelines, business owners need new methods to help accurately monitor their company's ever-changing capacity.

That's where tools like the Density Capacity Counter come in. Attach the device above any entrance or exit, and it will precisely count exactly how many people come through the threshold in real time. Now, you'll comfortably know that a safe amount of people are inside.

The user-friendly dashboard can track numbers using any computer or smartphone. The display can also be hooked up to a large screen that indicates current occupancy to others in or near the space. If the room, floor, or building is at capacity, the screen informs people to wait their turn. Once space frees up, it'll indicate that the next person in queue can enter.

Density's clients (which include Pepsi, Delta, and Amazon) love how Density uses heat—not a camera—to track occupancy. This makes it 100% anonymous so that customers and staff won't worry about their identity or personal information being monitored as well. Many current Density customers also rely on the device to better understand how their valuable office space is being used so they can ensure that every inch is efficiently utilized.

## 4-IN-1 SANITATION HUB

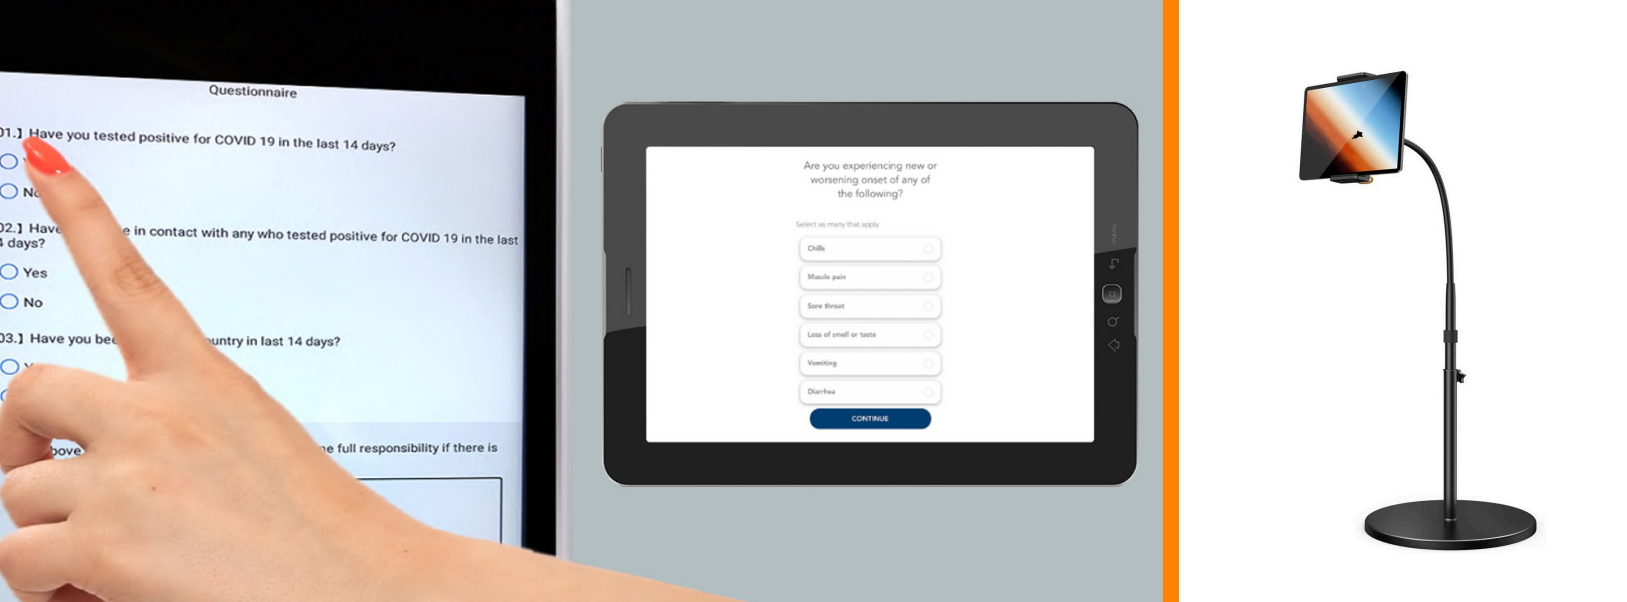

Stop requiring multiple stops for people to meet best safety practices. With the 4-in-1 Sanitation Hub, everyone can get their temperature checked, hands sanitized, PPE obtained, and messaging read all in one place.

If you're looking for a COVID safety powerhouse, look no further. The 4-in-1 Sanitation Hub combines the best features from our favorite devices to create a single, user-friendly unit. As employees and visitors walk into your doors, they will receive:

- **Self-Service PPE:** Users can grab masks and gloves eliminating any reason for people to enter the building without proper protection.
- **Hand Sanitizer:** Save money and buy in bulk as the device holds a gallon of sanitizer! When it starts running low, an automated alert will notify you that it's time for a refill.
- **Touchless Temperature Check:** Get a temperature accuracy of +/- .5 degrees, and receive elevated temperature notifications via email and text.
- **Digital Display:** Keep everyone who walks in fully informed of all current policies and best practices using a bright, full-color, customizable screen.

When promoting a safe workplace, simplicity makes all of the difference. With a central hub, it's easy to take all necessary precautions when entering a space. It also allows leaders to gain confidence as they can see these precautions being taken firsthand. It's a win for everyone.

# HEALTH SCREENING SURVEY STATION

Proactively keep COVID out of the office by requiring everyone to take a health screening survey before they can enter. By asking questions through professional data software, you'll instantly add a level of protection.

Infectious diseases don't have to control our businesses. Just install this station at every entry point and ask staff, guests, and vendors to answer questions related to their current health, possible exposure, or other factors that could increase their risk of bringing the coronavirus through the door. If any answer raises a red flag, they'll be asked to leave the premises.

The Health Screening Survey Station's simple and reliable technology offers:

- **Quick Screening:** The customizable survey only takes a few seconds to complete.
- **Clear Display:** A gorgeous, eye-catching screen is large and easy-to-read.
- **Health Verification:** Extra confidence that those with symptoms or other risks won't enter.
- **Complete Reporting:** All information is sent to managers or administrators.
- **App Options:** We'll help you choose and install the right software for your business.
- **Great Add-Ons:** Attach a hand sanitizer or use in conjunction with other products.

# AUTOMATIC HAND SANITIZER & DIGITAL DISPLAY

The [key to a safe workplace](#) is awareness and action. As the pandemic lingers on, even the most diligent can fall back into less sanitary habits. This device combats this problem by keeping users clean and informed.

Hand sanitizing dispensers are already everywhere these days. What's so different about this specific hand cleanser? The bright, eye-catching, and fully customizable digital display with slideshow AND video capabilities—plus some cost-cutting features!

- **Digital Display:** Communicate important safety information in real-time through the 21.5" screen. Easily schedule and manage all content remotely.
- **Portable Design:** At just 21 pounds, the Auto Hand Sanitizer Display can be wall-mounted or attached to a movable stand.
- **Cost Savings:** No more small sanitizer bottles that require constant replacement. Instead, buy your favorite gel, foam, or liquid hand sanitizer in bulk sizes and refill less frequently.

With units scattered around your business, people are consistently reminded of healthy best practices, social distancing protocols, and the importance of clean hands via a clear messaging system. Now it's simple for anyone to take action and stay germ-free.
